Removes a tag from the symbol.

Declaration

```
public bool RemoveTag(  
    string remove  
)
```

Parameters

Parameter	Type	Description
remove	string	String tag to remove.

Return value

`bool` True if the tag was removed; otherwise false if the tag was not present.

Definition Property

Gets the symbol's definition.

Declaration

```
public IntermediateSymbolDefinition Definition { get; set; }
```

Fields Property

Gets the symbol's fields.

Declaration

```
public IntermediateField[] Fields { get; set; }
```

Id Property

Gets the optional identifier for the symbol.

Declaration

```
public Identifier Id { get; set; }
```

Direct access by index to the symbol's fields.

Declaration

```
public IntermediateField Item[  
    int index  
] { get; set; }
```

Parameters

Parameter	Type	Description
index	int	Index of the field to access.

SourceLineNumbers Property

Gets the optional source line number of the symbol.

Declaration

```
public SourceLineNumber SourceLineNumbers { get; set; }
```
