

WiX managed SDK

WixToolset.Dtf.WindowsInstaller.Linq namespace

Queryable Class

Queryable Class

Allows any Database instance to be converted into a queryable database.

Methods

Method	Description
AsQueryable(db)	Converts any Database instance into a queryable database.

WixToolset.Dtf.WindowsInstaller.Linq.dll version 4.0.2+644ed0118bae1aa885bb6cc906dc6c0b904de4d9

AsQueryable(db) Method

Converts any Database instance into a queryable database.

Declaration

Parameters

```
public static QDatabase AsQueryable(  
    WixToolset.Dtf.WindowsInstaller.Database db  
)
```

Return value

`QDatabase` Queryable database instance that operates on the same MSI handle.

Remarks

This extension method is meant for convenient on-the-fly conversion. If the existing database instance already happens to be a `QDatabase`, then it is returned unchanged. Otherwise since the new database carries the same MSI handle, only one of the instances needs to be closed, not both.
