🏠   WiX managed SDK   WixToolset.Dtf.WindowsInstaller namespace   FeatureInstallation Class

FeatureInstallation Class

Represents an instance of a feature of an installed product.

Properties

Property	Description
FeatureName	Gets the name of the feature.
Parent	Gets the parent of the feature, or null if the feature has no parent (it is a root feature).
State	Gets the installed state of the feature.
Usage	Gets the usage metrics for the feature.

`WixToolset.Dtf.WindowsInstaller.dll` version `4.0.2+644ed0118bae1aa885bb6cc906dc6c0b904de4d9`

FeatureName Property

Gets the name of the feature.

Declaration

```
public string FeatureName { get; set; }
```

Parent Property

Gets the parent of the feature, or null if the feature has no parent (it is a root feature).

Declaration

```
public FeatureInstallation Parent { get; set; }
```

Remarks

Invocation of this property may be slightly costly for products with many features, because it involves an enumeration of all the features in the product.

State Property

Gets the installed state of the feature.

Declaration

```
public InstallState State { get; set; }
```

Win32 MSI API: MsiQueryFeatureState

Usage Property

Gets the usage metrics for the feature.

Declaration

```
public FeatureInstallation+UsageData Usage { get; set; }
```

Remarks

If no usage metrics are recorded, the «see P:WixToolset.Dtf.WindowsInstaller.FeatureInstallation.UsageData.UseCount» value is 0.

Win32 MSI API: MsiGetFeatureUsage
