🏠   WiX managed SDK   WixToolset.Data.WindowsInstaller namespace   WindowsInstallerStandard Class

WindowsInstallerStandard Class

Methods

Method	Description
GetPlatformSpecificDirectoryId(directoryId, platform)	Gets the platform specific directory id for a directory. Most directories are not platform specific and return themselves.
IsStandardAction(actionName)	Find out if an action is a standard action.
IsStandardDirectory(directoryId)	Find out if a directory is a standard directory.
IsStandardProperty(propertyName)	Find out if a property is a standard property.
StandardActions()	Standard actions.
StandardDirectories()	Standard directories.

`WixToolset.Data.dll` version `4.0.2+644ed0118bae1aa885bb6cc906dc6c0b904de4d9`

GetPlatformSpecificDirectoryId(directoryId, platform) Method

Gets the platform specific directory id for a directory. Most directories are not platform specific and return themselves.

Declaration

```
public static string GetPlatformSpecificDirectoryId(
    string directoryId,
    WixToolset.Data.Platform platform
)
```

Parameters

Parameter	Type	Description
directoryId	string	Directory id to get platform specific.
platform	WixToolset.Data.Platform	Platform to use.

Return value

`string` Platform specific directory id.

IsStandardAction(actionName) Method

Find out if an action is a standard action.

Declaration

```
public static bool IsStandardAction(
    string actionName
)
```

Parameters

Parameter	Type	Description
actionName	string	Name of the action.

Return value

`bool` true if the action is standard, false otherwise.

IsStandardDirectory(directoryId) Method

Find out if a directory is a standard directory.

Declaration

```
public static bool IsStandardDirectory(
    string directoryId
)
```

Parameters

Parameter	Type	Description
directoryId	string	Name of the directory.

Return value

`bool` true if the directory is standard, false otherwise.

IsStandardProperty(propertyName) Method

Find out if a property is a standard property.

Declaration

```
public static bool IsStandardProperty(
    string propertyName
```

```
)
```

Parameters

Parameter	Type	Description
propertyName	string	Name of the property.

Return value

`bool` true if a property is standard, false otherwise.

StandardActions() Method

Standard actions.

Declaration

```
public static System.Collections.Generic.IReadOnlyCollection<WixToolset.Data.Symbols.WixActionSymbol>
StandardActions()
```

StandardDirectories() Method

Standard directories.

Declaration

```
public static System.Collections.Generic.IReadOnlyCollection<WixToolset.Data.Symbols.DirectorySymbol>
StandardDirectories()
```
